

Exam – Respiratory Protection Overview

True (T) or False (F)

1. T F All respirators can be used to protect against any contaminant.
2. T F You must be medically qualified prior to using a respirator.
3. T F Employers must have a written respiratory protection program.
4. T F Part of the site's respiratory protection program includes performing industrial hygiene surveys to determine if exposures are above permissible limits.
5. T F You must receive employer provided training on the proper use, maintenance and storage of respirators.
6. T F A change in medical conditions may affect your ability to safely use a respirator.
7. T F Engineering and administrative controls must be used by employers to reduce employee exposures to contaminants.
8. T F You may only use respirator types that you have been approved for by your employer.
9. T F You must be fit tested for every respirator type you use.
10. T F It is your responsibility to properly maintain and store your respirator.
