

## Exam – Closed-Top Container Unloading Safety Overview

### True (T) or False (F)

1. T F Prior to entering a closed-top container it is important to ensure the dock plate is securely placed.
2. T F Placing wheel chocks is a step in entering a closed-top container.
3. T F When unloading a closed-top container, start with the right-rear bundle.
4. T F It is OK to remove three bundles at a time when unloading a closed-top container.
5. T F Shifting bundles is not a potential hazard when unloading closed-top containers.
6. T F When using fork lift attachments, each attachment must be approved for use by the fork lift's manufacturer.
7. T F The procedure for unloading the last two bundles in a closed-top container is slightly different than the other bundles.
8. T F It is important for the unloader to maintain a safe distance from bundles in case they become unstable and fall or tip.
9. T F When lifting slabs bundles, it is important to keep the bottom of the bundle just off the floor enough to move it.
10. T F When more than one forklift is being used to move a slab bundle, it is important that each of the driver's remain in constant contact with each other.
