

Exam – Basic First Aid Summary

True (T) or False (F)

1. T F Universal precautions are means, methods and procedures to prevent a first aid Provider from coming into contact with blood borne pathogens and contracting a blood borne illness/disease.
2. T F If you get chemicals in your eyes, flush them with hot water for 10 minutes.
3. T F For an injury with uncontrollable bleeding, apply direct pressure to the wound area and call for 911 emergency services.
4. T F The first step in responding to an injury is to survey the area to ensure it is safe to respond.
5. T F For thermal and chemical burns to the body, the immediate response is to flush the affected area under tepid water.
6. T F For thermal or chemical burns that cause blistering or more severe damage to the skin, medical attention should be sought after first aid treatment.
7. T F Embedded particles or materials in the eye or eyelid should be removed and 911 emergency services should be called or seek medical treatment.
8. T F Persons with broken bones should not be moved until 911 emergency services arrive unless leaving them poses a risk of further injury.

(Select the best answer)

9. Which of the following requires immediate call for 911 emergency services:
